

TECHNICAL DATA (0036-11260C)

- Capacity: 1000-3000 kg/h, depending on product
- Weight: approx. 300 kg
- Dimensions: 1300 x 2200 mm

FF EASYDIP-100

“

With FF EasyDip-100 the vegetable roots can be treated with an agent that prevents browning. The treatment reduces the bacterial population on the products surface by preventing it from growing. The treatment agents also reduce the activity of root vegetable enzymes so that no discoloration or peeling occurs on the surface of the product.

The FF EasyDip-100 is automatic and the processing time and amount can be adjusted as desired. By using the machine, the same regulated treatment is obtained for all products.

Manufactured by Forsfood Oy
