TECHNICAL DATA (CSM-900)

- Capacity: Up to approx. 5.000 kg. per hour depending on the required slicing size.
- Products: Cabbages (white and red).
- Available on machine feet or on frame with

CABBAGE SLICING MACHINE CSM-900

“

The industrial cabbage slicing machine CSM is constructed with a wide infeed gutter, which feeds the (decorated) cabbage onto the special cutting disc.

On the disc the knives are mounted in such a way that a perfect cutting result can be obtained. The length of the cut can be influenced by adding cut interrupters (optional). Through a wide outfeed chute the cut product leaves the cabbage slicing machine.

The cabbage slicing machine has a cutting diameter of 900 mm in combination with 12 knives and can process cabbages with a diameter of 330 mm without pre-cutting.

The whole construction is easy to tilt making the machine and cutting disc simple to clean.

The cut interrupters are integrated in so-called blocks, which can be exchanged with other pre-cutting sizes. The machine as the disc is constructed in stainless steel.
